UAV Radar

Outer Casing

Radomes and other  
outer casing material

**RF and Microwave Absorbers  
Eccosorb and others**

- Eccosorb JCS and others.
- Our absorber products are currently used in many Aerospace applications and classified programs.

**Thermal Interface Material  
Tflex/Tpcm/Tputty**

- Tpcm 780 and Tpcm 7000.
- Some Tflex Series meets NASA outgassing specs.
- Qualification testing is being done on our dispensable materials.

# Performance Materials Products

## RF & Microwave Absorbers

- Laird offers many different absorber solutions spanning across a wide frequency range from cavity resonance to free space applications:
  - Injection Molded, Cast Liquids, and Thermoplastics.
  - Low Loss Dielectrics.
  - Elastomers and Films.
  - Absorbing Foams.
  - Gap Fillers.
  - Custom Magnetic Absorbers.

Eccosorb

Softzorb

Absorbing Foams

## Radomes

- Laird offers radome materials to enhance antenna signal performance and provide better impact resistance:
  - Radome5 LS.
  - Radome5 TP.
  - Radome5 Unity.
  - Radome Auto.
  - Rezorb.
- From injection molded material to custom made parts to fit an application, Laird has the capabilities to provide a solution for almost any antenna application.

## Thermal Interface Materials

- As an industry leader in high-performance thermal interface materials, with new products released this year, Laird offers the following categories:
  - **Gap filler pads** now up to 34 W/mK thermal conductivity.
  - **Thermal putties** with dispensing options.
  - **Phase change materials** now up to 7.5 W/mK.
  - **Thermal greases** ranging from 1-4 W/mK.
  - **Thermally-conductive insulators.**
- Additionally, Laird has the capabilities to die cut materials and offer dispensing options.

Laird Co

## Precision Metals

- Laird Performance Materials offers many different standard and custom lightweight precision metals such as:
  - **Board Level Shields** with lightweight and ultra low board level shields.
  - **Fingerstock and Spring Contacts.**
  - **Custom Metals** for structural support and/or EMI shielding.
- Added value capabilities with state-of-the-art software simulations to ensure product reliability.

# Performance Materials Products

## Magnetic Ceramic Product

- There is a wide assortment of products within the Laird MCP line, our line includes:
  - Power inductors.
  - Common mode chokes.
  - Wireless charging coils & flexible ferrite sheets.
  - Ferrite chip beads.
  - Ferrite Cable Cores.
  - Baluns & Toroids.

<https://www.laird.com/products/inductive-components-wireless-charging-coils>

## EMI Gasketing

- Laird offers EMI gasketing solutions for almost any application with high shielding effectiveness, our product line offers:
  - Conductive Foams (CF).
  - Fabric Over Foams (FOF).
  - Conductive Fabrics.
  - Electrically Conductive Elastomers (ECE).
  - Form In Place (FIP).
- There are many options for Laird gaskets from ultra soft materials (silicone or silicone free) to wire mesh materials.
  - All of which can come in custom profiles, die cut parts, or standard solutions.

# Performance Materials Products

## Multi-Functional Solution (MFS)

Laird offers MFS, showcased below, that combine multiple different product lines together to create a single package.

- **BLS + Insulation Layer** (Dielectric Coating).
- **BLS + Absorber.**
- **BLS + Graphite Heat Spreader.**
- **BLS + Thermal Interface Material.**
- **BLS + Black Paint** (aesthetic purposes).
- **BLS + Several Laird Components Combined.**

## Other Laird Product Offerings

Laird offers many different product spanning all electronic industries. Other product offerings that have not been discussed are listed below:

- **Thermal Adhesive Tape** coming soon.
- **EMI Tapes.**
- **Thermal Heat spreaders.**
- **Coolzorb** combines characteristics of our thermal and Absorber product lines into one.
